Rules:

1) leak_detected ∧ power_on → alarm
   given: 1 given: 1 1

2) alarm ∧ supervisor_present → response_team_called
   inference: 1 given: 1 1

3) response_team_called ∧ valve_closed → pressure_isolated
   1 1 1

4) pressure_isolated ∧ leak_detected → hazard_mitigated
   1 1 1

5) leak_detected ∧ valve_closed → pressure_builds
   1 1 1

6) pressure_builds ∧ leak_detected → hazard
   1 1 1

7) hazard ∧ response_team_called → site_closed
   1 1 1

8) hazard_mitigated ∧ power_on → operation_continue
   1 1 1

9) response_team_called ∧ trained_staff → evacuation
   1 ? ?

given:

leak_detected	= 1
power_on	= 1
valve_closed	= 1
supervisor_present	= 1

inference:

alarm	= 1
response_team_called	= 1
pressure_isolated	= 1
hazard_mitigated	= 1
pressure_builds	= 1
hazard	= 1
site_closed	= 1
operation_continue	= 1
evacuation	= ?

Q1 = operations_cont = 1

Q2 = site_closed = 1

Q3 = hazard = 1

Q4 = evacuation = ?

Rule path to derive operation-continue:

$1 \rightarrow 2 \rightarrow 4 \rightarrow$ operation-continue (8)

Rule path to derive site_closed

$5 \rightarrow 6$

$1 \rightarrow 2$

$\rightarrow$ site_closed (7)

Rule path to derive hazard

$5 \rightarrow$ hazard (6)

Rule path to derive evacuation:

Evacuation is not derivable. Altough response-team-called derived, Rule 9 also required trained-staff. It is not a fact and no rule produce it. So that, evacuation cannot be concluded.
